<b>Division</b>	<b>Voice</b>
<b>Reports to (title)</b>	<b>Senior Product Manager</b>
<b>Location base</b>	<b>Salford</b>

**Additional job specific responsibilities and accountabilities**

**Introduction**

Voice and Conversational User Interfaces are the new frontier in interaction with internet services. From Alexa to Siri, Google Assistant to Cortana, the way we interact with the internet is changing, and fast. Assistants are rapidly becoming a part of everyday life for millions of our consumers and are now the fastest growing medium for interaction with the internet across the country. Our mission within the newly formed BBC Voice and Conversational Interfaces team is to shape interaction with the BBC at both an audience and organisational level through these assistants, and pioneer new formats and technology that bring the BBC to life in an artificial intelligence first world. It's exciting stuff.

The Product Manager ensures that the BBC creates the most compelling products possible within a given field, sector or technology. In this case, you'll be working with our product and editorial teams from across the business to build the BBC's content offering and interaction model to all 3rd party voice assistants, in addition to working with our platform colleagues to develop the technology platforms that will power the BBC as we evolve in to an AI first digital world.

Creating insight to drive BBC priorities and performance is critical – a PM looks to user research, analytics data, market research, competitors and their own product instincts to help the BBC make the best digital products possible.

The PM has three key responsibilities: assessing product opportunities derived from an understanding of business strategy, defining the product to be built to deliver the maximum return on investment, and communicating to stakeholders.

The post holder works with key editorial, commercial and technical stakeholders to design and deliver the required product, measure its success, lead the prioritisation process of backlog items and the creation and maintenance of the roadmap for their respective product.

He/she works with the technical team to create a product that delights and entertains our audience, is useful, usable and feasible.

**Responsibilities**

- The Product Manager will work at the heart of a multi discipline team on the shaping and delivery of a range of audience-facing products and product capabilities and services.
- To develop and deliver on the product vision for a set of products and services in line with the department's strategy and objectives.
- To own the full product lifecycle of a set of products and services – including mature

products, recent launches and emerging ideas.

- To lead the impact analysis on and prioritisation of effort on a set of products and services.
- To be a voice for our users – ensuring that their needs and abilities are at the heart of our propositions.
- To work closely with stakeholders to develop a shared product and content strategy and drive the product direction against it.
- To develop relationships with third parties to enable the delivery of full products or elements of our products and services.
- To build relationships with other areas of the BBC key to the successful delivery of our products and services
- To actively contribute to the development of product management best practice and the department's collaborative culture.

### **The ideal candidate**

- Has demonstrable experience of product management of digital products – including product lifecycle management, roadmap definition, product shaping and prioritisation.
- Has worked in software development and has, ideally, an understanding of app development and app product lifecycles.
- Understanding of business analysis techniques and practices.
- Is a team player comfortable working in a multi-disciplinary team.
- Can use data and a build - measure - learn approach to drive product development and decision-making.
- Is comfortable working with and communicating to senior stakeholders.
- Has experience of building and managing relationships with third parties.
